Thermostatic actuator RAVI

- for 2-way valves RAV-/8 (PN 10), VMT-/8 (PN 10), VMA (PN 16)

Description

RAVI is self-acting thermostatic actuator primarily for use for temperature control of small hot water cylinders - either storage type cylinders or instantaneous hot water heaters.

RAVI can be combined with 2-way valves:

- RAV-/8,
- VMT-/8 and
- VMA

Controller closes on rising temperature.

The temperature controller is type-tested according to EN 14597.

Main data:

¹⁾ In installations where quiet function is required, the differential pressure across the valve should not exceed 1 bar.

Application principles

The actuator RAVI must be installed in the return pipeline only.

Installation positions

Temperature controller

The valve body must be installed in the return pipeline with flow in the direction indicated by the cast-in arrow.

Temperature sensor

The sensor must always be placed warmer than the bellows.

For best performance it is recommended to install the sensor facing up.

Sizing

Example:

Temperature control of service hot water

Given data:

Tank output: 10 kW (8600 kcal/h)
Cooling (flow – return): 20 °C

Flow: $\frac{8.6}{20} = 0.43 \text{ m}^3/\text{h}$

Differential pressure
Δp across valve: 0.12 bar

Required:

Correct valve size

Method:

Use the water quantity (0.43 m³/h) and differential pressure (0.12 bar) to read off the necessary k_v-value = 1.25

In this case, sizing is for a P-band of 6 °C. In the table of k_v-values, look under 6 °C and find the valve body having the necessary k_v-value. In this case the valve body most suitable is the RAV 15/8 or VMT 15/8 with a k_v-value of 1.3 .
